The New WU Stands for...

Diversity in its perspectives on business and economics.

An international attitude and **open-mindedness** towards academic, intellectual exchange and real-life business practice.

A strong sense of **responsibility** to the economy, society, and the government, and a commitment to make a sustainable contribution to a new and improved economy, today and in the future.

Innovation and a new way of thinking to create new approaches for dealing with business and economic phenomena of the 21st century, and for generating modern theories and practical advice for the business community.

Rethink Economy

Willkommen an der neuen WU.
